The Hustle System

Project Status Report

Enterprise Management Platform

Report Date: October 10, 2025

📋 Project Overview

The Hustle System is an enterprise management platform with role-based access control for 6 user types: CEO, Co-founder, Manager, HR, Sales, and Individual employees. The system manages projects, tasks, attendance, payroll, leave requests, meeting scheduling, client management, and company announcements through dedicated dashboards.

Tech Stack: React.js + Node.js + MongoDB
Current Status: Core features operational, advanced features in development

📊 Implementation Status

✅ COMPLETED & WORKING (Production Ready)

Feature	Status	Description
Authentication System	✅ 100%	Login, registration, JWT tokens, role-based access
User Management	✅ 100%	Multi-role users, profiles, permissions

Feature	Status	Description
Dashboard System	✅ 100%	5 role-specific dashboards with navigation
Basic Project Management	✅ 85%	Project creation, manager assignment
Core Task Management	✅ 80%	Task creation, assignment, status updates

🟡 IN PROGRESS (Partially Working)

Feature	Completion	What Works	What's Missing
Attendance System	60%	Punch in/out, basic tracking	Reports, analytics, overtime
Leave Management	50%	Request submission, basic approval	Multi-level approval, balance tracking
Payroll System	40%	Data structure, manual creation	Automation, calculations, slip generation
Task Evidence	70%	Screenshot/URL submission	Automated verification, notifications

❌ NOT STARTED (Planned)

Core Features to Develop

- Performance Analytics Dashboard
- Email/SMS Notification System
- Advanced Reporting & Exports
- Document Management System

New Features for Development

- **Calendar & Meeting System** - Integrated calendar for all users with meeting scheduling
- **HR Announcement Feature** - Company-wide announcement system from HR dashboard
- **Sales Dashboard** - Dedicated sales team interface with client meeting scheduling
- **Client Management System** - Co-founder + Sales collaboration for client meetings
- **Voice Agents Integration** - AI voice assistants for Company Summary Dashboard
- **Company Summary Dashboard** - Executive summary with AI-powered insights

👥 User Roles & Current Capabilities

Role	Dashboard Features	Status
CEO	Executive overview, all access, company summary	✅ Working
Co-founder	Project management, team oversight, client meetings	✅ Working
Manager	Task assignment, team management	✅ Working
HR	Employee management, payroll interface, announcements	✅ Working
Sales	Client management, meeting scheduling	❌ To Develop
Individual	Personal tasks, attendance, leave requests, calendar	✅ Working

🎯 Current System Capabilities

● What Works Right Now

- Complete user authentication for all 5 roles
- Role-based dashboards with appropriate access controls
- Project creation and manager assignment
- Task creation, assignment, and status tracking
- Basic attendance punch-in/punch-out
- Leave request submission and basic approval
- User profile management
- Basic payroll record management

● What Needs Work

- Automated workflows and notifications
- Advanced reporting and analytics
- Complete payroll automation with calculations
- Multi-level leave approval system
- Attendance analytics and reporting
- Performance evaluation metrics

📅 Next Development Phase

High Priority

1. **Automated Notifications** - Email alerts for tasks, leave approvals
2. **Attendance Reports** - Analytics, overtime calculation, monthly reports
3. **Complete Payroll Automation** - Attendance-based calculations, slip generation

4. **Enhanced Leave System** - Balance tracking, multi-level approvals

Medium Priority

1. **Calendar & Meeting System** - Integrated calendar for all users with scheduling
2. **HR Announcement Feature** - Company-wide announcement system
3. **Performance Analytics** - Task completion metrics, employee productivity
4. **Advanced Reporting** - Custom reports, PDF exports

New Feature Development

1. **Sales Dashboard** - Complete sales team interface with client management
2. **Client Meeting Workflow** - Co-founder + Sales collaboration system
3. **Voice Agents Integration** - AI assistants for Company Summary Dashboard
4. **AI-powered Analytics** - Executive insights and analytics
5. **Document Management** - File uploads, approval workflows

🆕 New Features Overview

📅 Calendar & Meeting System

- **All Users:** Personal calendar with meeting scheduling
- **Cross-role Integration:** Schedule meetings with any team member

- **Meeting Types:** Internal meetings, client meetings, project discussions
- **Features:** Calendar views, meeting reminders, availability checking

📢 HR Announcement System

- **HR Dashboard:** Create and manage company-wide announcements
- **Distribution:** Push notifications to all employee dashboards
- **Categories:** General updates, policy changes, events, important notices
- **Features:** Rich text editor, attachment support, read receipts

💼 Sales Dashboard & Client Management

- **Dedicated Sales Interface:** Complete CRM functionality
- **Client Database:** Contact management, interaction history
- **Meeting Scheduling:** Book client meetings with Co-founder collaboration
- **Pipeline Management:** Track leads, prospects, and deals
- **Reporting:** Sales metrics and performance tracking

🗣️ Voice Agents Integration

- **AI Assistants:** Voice call summary of whole company data
- **Call Summaries:** Transcribe calls into actionable notes
- **Question Answering:** Provide answers to common queries about the company
- **Language Support:** Multilingual capabilities for global teams
- **Multi-language Support:** English and regional language support

📊 Company Summary Dashboard

- **Executive Analytics:** AI-powered company performance insights
- **Real-time Metrics:** Employee productivity, project status, financial overview
- **Predictive Analytics:** Trend analysis and forecasting
- **Voice Integration:** Ask questions and get instant voice responses

---

Project Status: ✅ Core System Operational + 🆕 Major Feature Expansion Planned

Deployment Status: Ready for internal testing

Next Milestone: Complete automation + Begin new feature development
